

AGRHS MATHEMATICS PLACEMENT Secondary 4 and 5

In secondary 3, you must make a course selection for mathematics in secondary four. This choice sets the path for secondary 4 and secondary 5.

This choice also affects your possible courses option and your access to post-secondary education programs. The choices that you have are Cultural, Social and Technical option (CST) and Science option (S).

Each option has a different content and different teaching approaches.

Your choice is made from several factors:

- Your skills in mathematics and science;
- Your future education plan;
- Your strengths and your interests;
- Your motivation and your perseverance (determination to succeed)

It is an important decision so take the time to consult:

- Your parents
- Your math teacher
- Your guidance counsellor

Remember that the Math Sec. 4 credits are required. You cannot graduate without those credits.

- Students entering Sec. 4 earning a 76% or higher in math should consider the Mathematics Science option.
- The recommendation for students earning less than a 76% is to take Cultural, Social and Technical option (CST) in Sec. 4.
- If a higher-level math is required for your career path, and you succeed with high grades in Cultural, Social and Technical option (CST) in secondary 4, then take secondary 4 Math Science option (S) when you are in secondary 5. At CEGEP, you can take a bridge course to access the program that you want having the Sec 4 Math Science course.
